# Patch Test Chambers

## General characteristics and advantages

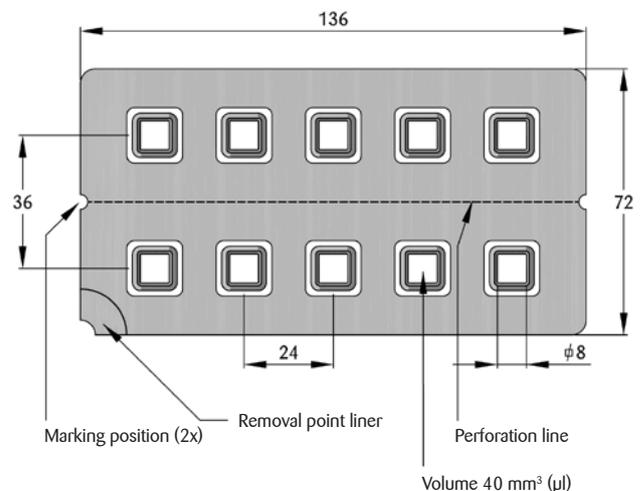

The improved Van der Bend Patch Test Chamber combines all the advantages of the current chamber-technologies and is therefore the most complete patch test system for the optimum performance of contact allergy testing.

- Compact design
- High-grade, medically tested materials
- Filter papers are fixed in the chamber in a unique way, and without using glue, so that they do not remain on the skin once the plaster has been removed
- Quick and easy application
- Can be prepared in advance and covered using a special blister
- The plaster can be split into 2 strips of 5 chambers using a perforation line
- Indentations for marking with a skin marker
- Clear indication for top and bottom, left and right
- Optimal occlusion
- Square shape simplifies the differentiation between an allergic reaction and a toxic reaction
- Good, clear imprint of the chamber on the skin

Your distributor:

## Product specifications

- The chamber is made from a Polypropylene suitable for medical use
- Each chamber contains a chromatographic filter paper
- The plaster material can be written on and is made from hypo-allergenic, medical, non-woven polyester
- All of the materials used have undergone thorough testing and comply with all accepted medical quality standards

## Packing units and accessories

Van der Bend Patch Test Chambers are supplied in boxes of 50 plasters of 10 chambers as standard.

Optionally you can use:

- A blister to cover the chambers that have been prepared in advance
- A read-off template with pre-printed number coding for optimal diagnosis
